## Egg Scrubbing Dental Health Experiment

### Materials:

- 1 cup soda or soft drink
- 4 containers
- 1 cup vinegar
- 5 plastic cups or jars
- 1 cup fruit juice
- 1 cup water
- 1-4 toothbrushes
- Baking soda or toothpaste
- 4 hard-boiled eggs
- Paper towel
- 4 egg holders, optional

Start by placing your eggs in your plastic cups/jars. Make an index card or chart to show which liquids are in which containers. Pour liquids over the egg until they are completely submerged. Leave the plastic cups to soak overnight. If you leave them soaking for too long, the eggshells may start dissolving. The next day, one at a time, remove an egg from the liquid and place it in an egg holder. Encourage the children to observe and discuss what the liquids have done to the eggs and the color of the eggshells using their senses. The toothbrushes can be used to brush staining or film off the eggs.

This is a great way to show the power of brushing. You may want to provide paper and pencils or crayons for children to record their observations and conclusions. They can draw or print words to note what they observed.
